

MISSION ACCOMPLISHED

HIGH RISK: low quality repairs to hammer and press parts. Well maintained tools are critical in keeping production up!

LOW RISK: having the job done right by the #1 forging and die welding company around.

Do away with the shortcuts of stopgap shops. Porosity and improper pre-heating and post-heating are all bad welding practices. You should not have the tolerance for abuse to your vital hammer, press parts and tooling.

Come to Stellar Forge Products, where you can have your parts and tooling welded to your specs, and where we're working to forge industry standards without fail!

With 2 shifts, **SFP** processes your parts and dies 24 hours a day, 7 days a week, as if they were our own!

Invest in the right source—maximize your dollars and time. Come to **SFP** for unmatched quality welding and die life.

SFP-Stellar Quality!
