

We Are All Held to a Budget.

Why Not Start 2008 With A Surplus?

Why purchase new die steel? Add 6-side machining, hole drilling, keyways, shank & dowel & sinking, when your very own spent dies are readily available to weld & remachine at a fraction of the cost? The cost savings in using your own salvage material will allow you the extra capital to spend in other "need" areas.

History shows that welded metal, when applied in the proper **controlled conditions** including pre heat, post heat and stress relieve, will allow the new weld to become an integral part of the die/part and, in most cases, is "tougher" than the parent material itself.

Shortcuts & cheap pricing are not an option here at **Stellar Forge Products**. It only leads to poor quality and lost time to the forge. Our welders' skill levels and the continuity we demand are the same from start to finish. At SFP, you will have the peace of mind in knowing certified forging die welders are fulfilling all of your expectations. Doing it the right way!

You are a reflection of your suppliers.

Make the right choice, call SFP today!
