10,900# RAM (87)

5,360# RAM (89)

4,960# RAM (99)

Looking for a suitable backup ram or replacement for your primary hammer?

The costs and hours associated with finding a usable hammer part have you running in circles?

SFP not only refurbishes your own hammer rams and parts—we also have our own salvage hammer parts that can be refurbished to meet your standards.

Plus, we currently have salvage hammer rams in house that are out of service and are prime candidates to be reconditioned as quality spares.

SFP will scarf, weld, stress, remachine and supply sonic test reports to meet your custom hammer's standards.

Take advantage of this opportunity to get a reconditioned hammer ram for a competitive price without sacrificing quality and downtime to the forge!

If what you are looking for is not in stock, simply inquire and SFP can accommodate you.
