

# FORGING AND PRESS & HAMMER FORGE TOOLING DESIGN!

Stellar Forge Products has been providing full design and engineering to our press and hammer forgers since day one. Now, more than ever, they need us. Do you?

*Many of our industry's forge designers and engineers are retiring or leaving the industry. SFP can work hand-in-hand with your engineering staff. Here's what we can offer your company:*

- Envelope a finished part (forging) drawing
- Make modifications after simulation and provide sign-off
- Make full drawings for pre-form, blocker part, finished part, forging part, die layout, trim tooling, etc.
- Build all part models and die models using CATIA V5
- Supply full assembly drawings/models, bolsters, holders, die sets and all related tooling
- Implement engineering changes in a moment's notice
- Reverse engineer from an electronic model to a 2D print and back

*Days of the old-school forge designer and engineer are not over at SFP! Take advantage of our services—we can turn back the clock.*
